

## Task 1:

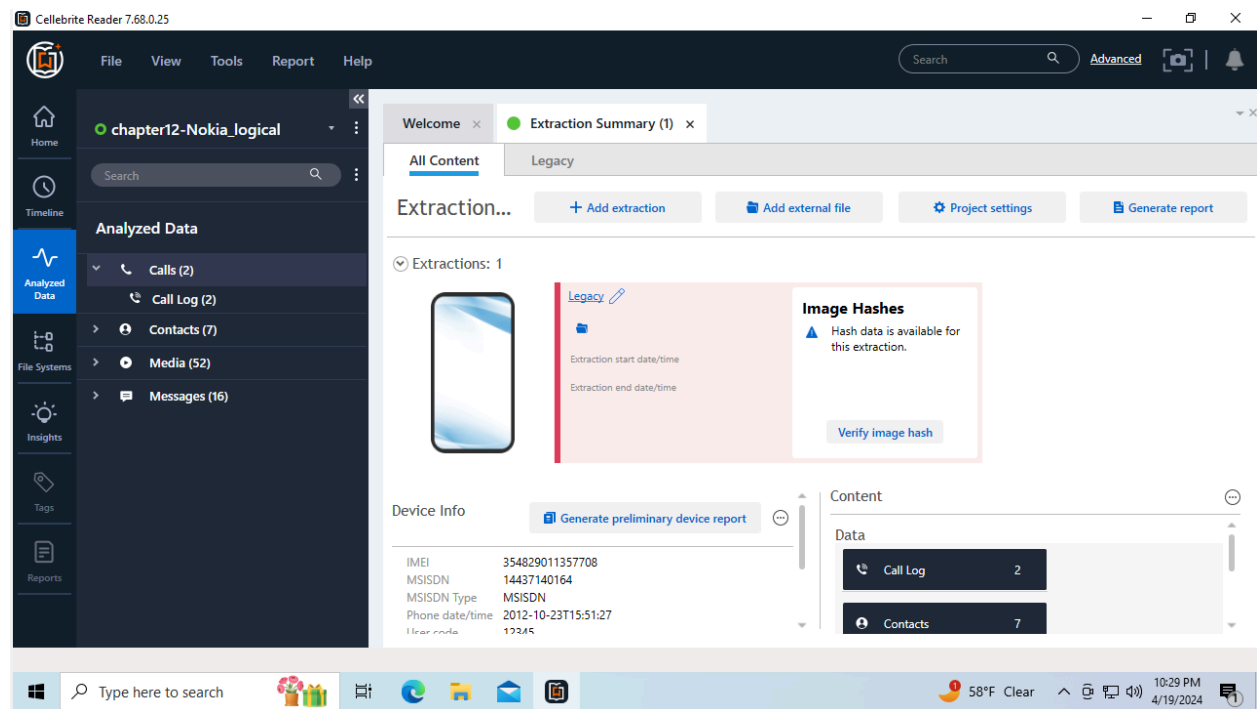

In this step, I have created an account and then logged in. I am now in the “Product and Licenses” tab.

I have downloaded the Cellebrite Reader.

In this step, I have opened the UFDR file.

In this step, I have analyzed the timeline, analyzed data, and file systems tab.

After looking through the data, I was able to examine the calls, messages and contacts that are on the phone. I also can look through the audio messages and images that were sent to and from the phone. This information is important because it allows the investigators to understand who the user has contacted on this phone and also what they talked about.
